ISBN: 1119976596 **ISBN13:** 9781119976592

Format: Paperback, PDF, ePub, Kindle, Audiobook

Page: 250 pages, Read: 6.1 hours

Size: 7.38 MB

Genre: Engineering

Summary

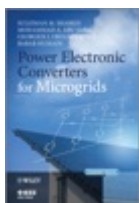

One of the challenges of teaching Electrical Systems to non-electrical students (e.g. mechanical engineering, aeronautics, astronautics, and ship science students) has been the breadth of the module, which encompasses many topics that are normally covered by several modules in an electrical engineering degree. This relatively short book presents the essential fundamentals in a concise yet rigorous manner, introducing case studies from non-electrical engineering disciplines, and cross-linking the material to other subjects (e.g. electrical and mechanical system analogies, fluids pipe flow networks, heat transfer thermal networks, instrumentation and control).

[POWER ELECTRONIC CONVERTERS FOR MICROGRIDS](#)

As concerns about climate change, energy prices, and energy security loom, regulatory and research communities have shown growing interest in alternative energy sources and their integration into distributed energy systems. However, many of the candidate microgeneration and associated storage systems cannot be readily interfaced to the 50/60 Hz grid. In *Power Electronic Converters for Microgrids*, Sharkh and Abu-Sara introduce the basics and practical concerns of analyzing and designing ...
